1. Straightforward Prompts

Definition:

Straightforward prompts are simple and direct instructions given to an AI system or user to obtain a clear and specific response. These prompts do not include any additional context, conditions, or complex structure. They are designed to be easy to understand and quickly answered. This type of prompting is commonly used when the user needs a precise answer, definition, or a short list of information without any explanation or comparison. It is widely used in basic learning, quick queries, and fact-based questions.

Prompt 1:

- "Define artificial intelligence in one sentence."
  Answer:
  Artificial Intelligence is the ability of machines to perform tasks that require human intelligence.

Prompt 2:

- "List three advantages of online learning."
  Answer:

1. Flexible timing
2. Easy access to resources
3. Learn from anywhere

---

2. Tabular Format Prompting

Definition:

Tabular format prompting is a type of prompt where the user asks the response to be presented in the form of a table with rows and columns. This method helps in organizing information in a structured way, making it easier to read, compare, and analyze different data points. It is especially useful when dealing with multiple attributes or categories such as features, advantages, differences, or classifications. This type of prompt improves clarity and understanding by visually separating information into distinct sections.

Prompt 1:

- "Compare AC and DC current in a table."

Answer:

Feature	AC Current	DC Current
Flow	Alternates direction	Flows in one direction
Source	Generator	Battery
Usage	Household supply	Electronics

Prompt 2:

- "Provide a table of three programming languages with their uses."

Answer:

Language	Use
Python	Data analysis
Java	Application development
C	System programming

---

3. Preceding Question Prompting

Definition:

Preceding question prompting is a technique where the prompt begins with a question that introduces the topic, followed by an instruction to explain or describe it in detail. This type of prompt encourages deeper thinking and understanding by first making the user or AI consider the reason or concept behind a topic. It is commonly used in educational settings to develop analytical and explanatory skills. It also helps in generating more detailed and meaningful responses compared to simple direct prompts.

Prompt 1:

- "Why is water important? Explain its uses."

Answer:
Water is important because it is essential for all living organisms. It is used for drinking, cooking, agriculture, and cleaning.

Prompt 2:

- "How do plants grow? Describe the process."

Answer:
Plants grow through photosynthesis, where they use sunlight, water, and carbon dioxide to produce food and energy.

---

4. Missing Word Prompting

Definition:

Missing word prompting is a type of prompt where one or more words are intentionally left blank, and the user or AI is required to fill in the correct answer. This method is mainly used to test knowledge, memory, and understanding of key concepts. It is widely used in quizzes, exams, and practice exercises. This type of prompting helps in reinforcing learning by encouraging recall and recognition of important facts or terms.

Prompt 1:

- "The capital of India is ____."
  Answer:
  New Delhi

Prompt 2:

- "Plants prepare food by the process called ____."
  Answer:
  Photosynthesis
